SUMMARY

Unity Game Developer specializing in scalable gameplay systems and high-performance mobile engineering, with proven success optimizing real-time multiplayer features and cutting build sizes by over 90%. Experienced across full lifecycle game development, integrating Web3/Web2 payment pipelines, AR applications, and high-density DOTS systems.

TECHNICAL SKILLS

Tools: Git, GitHub, Jenkins, Docker, Heroku | **Concepts:** Gameplay Systems, In-Game Economies, Mobile Optimization, Asset Management, Real-Time Multiplayer | **Databases:** Firebase, SQL | **Programming Languages:** C#, Java, JavaScript, Python | **Frameworks:** Unity, Node.js, Quarkus, Vuforia AR, Addressables

EXPERIENCE

Osten Games

May 2025 — Apr 2026

Unity Game Developer

- Rebuilt game store backend and integrated Xsolla to enable Web3 item purchases via traditional Web2 payment options
- Engineered C# gameplay systems including Season Pass, mission progression, and deck management with backend persistence
- Maintained Jenkins CI pipeline, migrated systems to Unity 6, and managed Android optimization, builds, and store releases

67 Bits

Mar 2023 — Feb 2025

Unity Game Developer

- Developed core gameplay mechanics, physics, and world exploration across multiple casual mobile titles in Unity
- Integrated ad monetization and analytics SDKs to drive revenue and track player engagement across iOS and Android
- Profiled and optimized low-end device performance while tuning difficulty progression to maximize player retention

Kepha

Aug 2021 — Jan 2023

Unity Developer

- Built augmented reality mobile applications using Vuforia, image recognition, target databases, and 3D overlays
- Implemented gamification features including mission rewards and competitive leaderboards within an Agile Scrum team

VirtuOne

Jan 2020 — Sep 2022

Fullstack Developer

- Architected real-time multiplayer networking using Node.js and WebSockets supporting 500+ concurrent users
- Created customizable avatar systems, spatial chat, and content sharing while applying LOD and occlusion culling

PROJECTS

DATA2073

- Built PvP card battler campaign and Season Pass economy, reducing build size from 800MB to under 68MB using Addressables

My Zombie World

- Programmed DOTS zombie AI handling 100+ entities at 60 FPS for Google Indie Fund project reaching ~100k downloads

Dungeon Chess

- Developed UI, localization system, and bug fixes for collaborative indie turn-based roguelike released on itch.io

EDUCATION

Cruzeiro do Sul Virtual

2019 — 2020

Postgraduate Degree in Business Intelligence & Databases

Centro Universitário de João Pessoa (UNIPÊ)

2013 — 2017

Bachelor of Science in Computer Science
